

```

classDiagram
    class CommandableBase {
        <<abstract>>
    }
    class Commandable {
        void execute()
    }
    class Command {
    }
    CommandableBase <|-- Commandable
    CommandableBase <|-- Command
    Commandable "1" -- "*" Command : Commandable
  
```

Diagram illustrating the relationship between Command, Commandable, and CommandableBase classes:

- CommandableBase** (Base Class)
 - Commandable** (Derived Class)
 - Method: `void execute()`
 - Attribute: `CommandableBase`
 - Command** (Derived Class)
 - Attribute: `Commandable`

Red annotations indicate:

- `void execute()` is a **Method**.
- `CommandableBase` is a **Base** class.
