Q10) Two sum problem
int [] arr = {2, 7, 11, 15};
int Target = 9;

```
package com.rani.basic;

class TwoSumProblem
{
    public static void twoSumProblem(int []arr, int target)
    {
        for(int i=0; i<arr.length; i++)
        {
            for(int j=i+1; j<arr.length; j++)
            {
                if(arr[i]+arr[j]==target)
                {
                    System.out.print(target+" found at "+i+","+j+" index position");
                }
            }
        }
    }
}
public class ArrayDemo10 {
    public static void main(String[] args) {
        int []values = {2,7,11,15,25,31} //9,11  1,3
        int target = 9;
        TwoSumProblem.twoSumProblem(values, target);
    }

}
```

Q11) Given an array of N integers, return true if the array is sorted in non-decreasing (Ascending) order or else false?

```
package com.rani.basic;

public class ArrayDemo10
{
    public static void main(String[] args)
    {
        int[] arr = {1, 3, 5, 5, 6, 89, 91};
        ArrayPrintInterface[]ip;

        public static boolean isSorted(int []arr)
        {
            for(int i=0; i<arr.length-1; i++)
            {
                if(arr[i] > arr[i+1])
                {
                    return false;
                }
                else
                {
                }
            }
            return true;
        }
}
```

Q12) Given an array of N integers, left rotate the array by one place?
Input : 1 2 3 4 5
Output : 2 3 4 5 1

```
package com.rani.basic;

import java.util.Arrays;

public class ArrayDemo11
{
    public static void main(String[] args)
    {
        int [] arr = {1,2,3,4,5};
        System.out.println("Original array :"+Arrays.toString(arr));

        int temp = arr[0];  // temp = 1;

        for(int i=0; i<arr.length-1; i++)  //i=4     4<5
        {
            arr[i] = arr[i+1];
        }

        arr[arr.length-1] = temp;

        System.out.println("Array after left rotation :"+Arrays.toString(arr));
    }
}
```
