

# Installing VS Code & Essential Extensions : By Gagan Baghel

## Step 1: Download and Install VS Code

1. Open your browser and search for **"VS Code download."**
2. Go to the official site: <https://code.visualstudio.com>.
3. Click **Download** for your operating system (Windows, macOS, or Linux).
4. Open the downloaded setup file.
5. Follow the installation wizard and click **Finish** once complete.

## Step 2: Set Up Your Project Folder

1. Create a new folder anywhere on your system (e.g., `Web_Projects` ).
2. This folder will contain all your HTML, CSS, and JS files.

## Step 3: Install Recommended VS Code Extensions

Open VS Code → Click the **Extensions** icon (5th icon on the left sidebar) → Search and install the following:

Extension Name	Purpose
<b>Live Server</b>	Launch your website locally and auto-refresh changes.
<b>Auto Close Tag</b>	Automatically closes HTML tags.
<b>Auto Rename Tag</b>	Updates paired HTML tags simultaneously.
<b>Prettier – Code Formatter</b>	Automatically formats your code for consistency.
<b>HTML CSS Support</b>	Provides autocompletion for HTML and CSS.
<b>Open in Browser</b>	Quickly open files directly in your browser.

Extension Name	Purpose
<b>VS Code Icons</b>	Enhances the file explorer with colorful icons.

## All recommended **VS Code Extensions for full stack Developer :**

Extension Name	Purpose
<b>Live Server</b>	Launch your website locally and auto-refresh changes automatically.
<b>Auto Close Tag</b>	Automatically closes HTML tags while typing.
<b>Auto Rename Tag</b>	Automatically renames the paired HTML tag when you edit one.
<b>Prettier – Code Formatter</b>	Automatically formats HTML, CSS, JS, and React code for consistent style.
<b>HTML CSS Support</b>	Provides autocompletion and hover info for HTML and CSS.
<b>Open in Browser</b>	Quickly opens your HTML files directly in a browser.
<b>VS Code Icons / Material Icon Theme</b>	Enhances the VS Code file explorer with colorful and descriptive icons.
<b>Path Intellisense</b>	Autocompletes file names and paths while linking images, CSS, or JS files.
<b>CSS Peek</b>	Lets you jump directly to CSS definitions or classes used in HTML files.
<b>IntelliSense for CSS Class Names in HTML</b>	Suggests existing CSS class names while typing in HTML.
<b>Error Lens</b>	Highlights code errors and warnings inline for faster debugging.
<b>Code Spell Checker</b>	Detects and highlights spelling mistakes in your code and comments.
<b>Bracket Pair Colorizer 2</b>	Assigns unique colors to matching brackets to improve readability.
<b>Better Comments</b>	Adds color coding and formatting for TODO, NOTE, and WARNING comments.

Extension Name	Purpose
<b>TODO Highlight / Todo Tree</b>	Highlights and organizes TODO comments in your codebase.
<b>Bookmarks</b>	Allows you to bookmark lines of code to easily navigate between them.
<b>GitLens — Git Supercharged</b>	Shows who changed what in your code and adds rich Git insights.
<b>JavaScript (ES6) Code Snippets</b>	Provides snippets for modern JavaScript syntax and features.
<b>ES7+ React/Redux/React-Native Snippets</b>	Offers quick snippets for React like <code>rafce</code> and <code>useState</code> imports.
<b>Simple React Snippets</b>	Lightweight extension for React component templates.
<b>Auto Import</b>	Automatically imports missing modules and functions in JavaScript/React.
<b>REST Client</b>	Test API endpoints directly within VS Code (no need for Postman).
<b>Thunder Client</b>	Lightweight, Postman-like extension to test REST APIs easily.
<b>npm Intellisense</b>	Autocompletes npm package names in import statements.
<b>DotENV</b>	Adds syntax highlighting and support for <code>.env</code> environment variable files.
<b>MongoDB for VS Code</b>	Connect to and manage your MongoDB database from VS Code.
<b>JSON Viewer</b>	Formats and prettifies JSON files for better readability.
<b>Color Highlight</b>	Displays the actual color next to CSS color codes (like <code>#ff5733</code> ).
<b>Highlight Matching Tag</b>	Highlights both opening and closing tags when you click one.
<b>Image Preview</b>	Shows image previews when you hover over image file paths.
<b>Indent-Rainbow</b>	Colors indentation levels for cleaner visual structure.

Extension Name	Purpose
W3C Web Validator	Checks and validates HTML/CSS code for standard compliance.

## Working with VS Code

### 1 Opening a Folder in VS Code

You can open your project folder in any of the following ways:

- **Option 1:** Right-click your folder → Select **Open with Code**.
- **Option 2:** In VS Code, go to **File** → **Open Folder** → **Select your folder**.
- **Option 3 (Command Line):**
  - Open the folder path in File Explorer.
  - Type `cmd` in the address bar → Press Enter.

- Then type:

`code .`

This opens the folder directly in VS Code.

### 2 Creating Your First HTML File

1. Inside VS Code, click the **New File** icon or right-click in the Explorer pane → Select **New File**.

2. Name the file:

```
index.html
```

3. Type `!` and press **Enter** — VS Code will automatically generate a basic HTML structure.
