

```

// Divide complement (Operator /-)
// It is a unary operator and It will not work with its boolean value.
// Example:
// (1) printf("%d", 5/-5); // valid
// It will work with positive & negative integer.
// In order to get the output we should use the following formulae
// n = - (n * 1)
// (2) n = -(n * 1)
// (3) printf("%d", 5 / -1); // 5 / -1 = -5
// (4) printf("%d", -5 / -1); // -5 / -1 = 5

```
