

HTML Semantic Tags : By Gagan Baghel

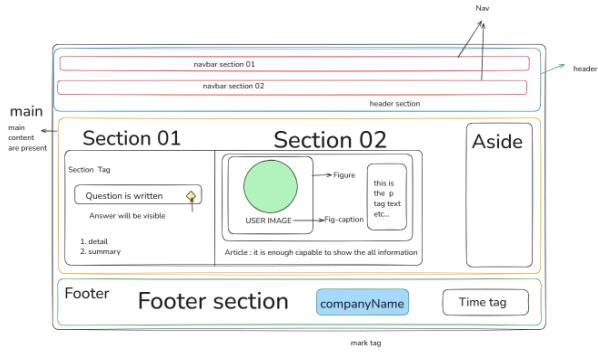

- Definition:**

⇒ Semantic tags are tags that tells the meaning of itself

Semantic tags are HTML elements that carry meaning beyond just presentation, indicating their role or purpose in the document.

⇒ We have more than 120+ semantic tags in html , but there are 13 standard semantic tags

1. `<article>` : Represents an independent piece of content (e.g., a blog post).
2. `<aside>` : Represents content that is tangentially related to the main content.
3. `<details>` : Specifies additional details or options that the user can view or hide.
4. `<figure>` : Represents media content (e.g., an image with a caption).
5. `<figcaption>` : A caption or description for a `<figure>` element.
6. `<footer>` : Represents the footer section of a document or section.
7. `<header>` : Represents the header section of a document or section.
8. `<main>` : Represents the main content of a document.
9. `<mark>` : Highlights text for relevance or emphasis.
10. `<nav>` : Represents navigation links.
11. `<section>` : Represents a thematic section of content.
12. `<summary>` : Represents a summary for a `<details>` element.
13. `<time>` : Represents a time or date.
