
JavaScript Practice Questions assignment

✅ Part 1: Conditions (if, if-else, else-if, ternary) – 10 Questions

1. Check if a number is positive

Write a program that takes a number and checks if it is **greater than 0** using an if statement.

```
let num = 10;
if (num > 0) {
  console.log("The number is positive.");
}
```

2. Check if a number is even or odd

Use the modulus operator (%) and if-else to check whether a number is **even (divisible by 2)** or **odd**.

```
let num = 7;
if (num % 2 === 0) {
  console.log("Even");
} else {
  console.log("Odd");
}
```

3. Find the greater of two numbers

Accept two numbers. Use if-else to compare and print the **larger one**.

4. Check if a person is eligible to vote

A person can vote if their age is **18 or above**. Write a program that checks eligibility based on the age.

5. Check if a number is divisible by 5 and 11

A number is divisible by both if it gives a remainder 0 for **both 5 and 11**.

```
if (num % 5 === 0 && num % 11 === 0) {
  console.log("Divisible by 5 and 11");
}
```

```
} else {  
  console.log("Not divisible by 5 and 11");  
}
```

6. Assign grade using else-if

Given a score, assign grades as follows:

- A: 90 and above
- B: 80–89
- C: 70–79
- D: 60–69
- F: Below 60

Use else if ladder.

7. Check if a character is a vowel or consonant

Input a single alphabet and check if it is one of a, e, i, o, u (vowel). Otherwise, it's a consonant.

8. Use ternary to check if number > 100

Use a **ternary operator** to print "Big" if number > 100, otherwise "Small".

```
let result = num > 100 ? "Big" : "Small";
```

9. Find the largest among 3 numbers using nested if

Accept 3 numbers and use if inside another if to compare and find the **largest**.

10. Check divisibility by 3 using ternary

Use ternary operator to check if a number is divisible by 3 and print the result.

Part 2: Loops with Conditions (20 Questions)

11. Print numbers 1 to 10

Use a for loop to print numbers from **1 to 10**.

12. Print even numbers 1 to 50

Use loop + if to check if each number is divisible by 2, then print.

13. Print numbers divisible by 3 from 1 to 100

Loop through numbers 1–100 and print only if divisible by 3.

14. Count numbers divisible by 7 between 1–100

Use a counter to track how many numbers in 1–100 are divisible by 7.

15. Sum of odd numbers from 1 to 50

Use loop + if ($\text{num} \% 2 !== 0$) to add only odd numbers.

16. Print square of numbers 1 to 10

Use for loop and print each number's square using `Math.pow()` or $n * n$.

17. Print only positive numbers from an array

Given an array, loop through it and use if to print only numbers > 0 .

```
let arr = [2, -5, 6, -1, 3, -9];
```

18. Count numbers > 10 in array

Count how many elements in the array are greater than 10.

19. FizzBuzz (classic problem)

For numbers 1–30:

- Print Fizz if divisible by 3
 - Print Buzz if divisible by 5
 - Print FizzBuzz if divisible by both
-

20. Check if a number is prime

A prime number is only divisible by 1 and itself. Loop from 2 to $n - 1$ and check if divisible by any number.

21. Sum of digits of a number

Given a number like 123, break it into digits and sum them: $1 + 2 + 3 = 6$.

22. Reverse a number

Use loop to extract digits from the end and build the reverse. (e.g., 123 → 321)

23. Factorial of a number

Factorial of n is $n * (n-1) * \dots * 1$. Use a loop to calculate factorial.

24. Print first 10 multiples of a number

Input a number and print its first 10 multiples using a loop.

25. Count vowels in a string

Loop through a string and count how many characters are vowels (a, e, i, o, u).

26. Print even numbers from array

Given an array, print only the even values.

27. Find largest number in array

Loop through the array, compare and track the largest number.

28. Print "Pass" or "Fail" using ternary

For each mark in an array, use ternary:

```
mark >= 40 ? "Pass" : "Fail"
```

29. Count negative numbers in an array

Use loop + if ($\text{num} < 0$) to count how many elements are negative.

30. Print numbers divisible by 3 but not 9

Loop through array or range. Use:

```
if (num % 3 === 0 && num % 9 !== 0)
```
