

```
1 // This program is a simple implementation of a linked list. It includes functions to create, insert, delete, and display the list.
2 // The list is implemented as an array of pointers to nodes. Each node contains a data field and a pointer to the next node.
3 // The list is initially empty. The user can insert nodes at the end of the list or delete nodes from the list.
4 // The list is displayed as a sequence of data values.
5 // The program is written in C++ and uses the standard library.
6 // The program is compiled and run on a Windows machine.
7 // The program is run in a command prompt window.
8 // The program is run in a command prompt window.
9 // The program is run in a command prompt window.
