

Api Calling : By Gagan Baghel

1. Basic Fetch Request

Instruction:

Write a JavaScript program that fetches data from an API and prints the response in the console using `fetch()` .

2. Converting Response to JSON

Instruction:

Fetch data from an API and convert the response into **JSON format** using `.json()` .

3. Handling Fetch Errors

Instruction:

Write a program that handles errors when an API request fails using `.catch()` .

4. Displaying API Data

Instruction:

Fetch data from an API and display one value from the response on the webpage.

5. Using `async/await` with Fetch

Instruction:

Rewrite a fetch API call using `async` and `await` instead of `.then()` and `.catch()` .
