

Timing function lab Questions :

By Gagan Baghel

1. `setTimeout` – Basic Usage

Instruction:

Write a JavaScript program that prints **"Hello after 2 seconds"** using `setTimeout()` .

2. `setInterval` – Repeated Execution

Instruction:

Create a program that prints **"Hello World"** every **1 second** using `setInterval()` .

3. Clearing a Timeout

Instruction:

Write a program where a `setTimeout()` is scheduled for **5 seconds**, but it is **cancelled before execution** using `clearTimeout()` .

4. Clearing an Interval

Instruction:

Create a counter that prints numbers from **1 to 5** every second using `setInterval()` , and stop it after **5 counts** using `clearInterval()` .

5. Arrow Function with `setTimeout`

Instruction:

Use an **arrow function** inside `setTimeout()` to print **"Arrow function executed"** after **3 seconds**.

6. Multiple `setTimeout` Calls

Instruction:

Write a program that prints:

- `"First"` after 1 second
- `"Second"` after 2 seconds
- `"Third"` after 3 seconds

Use separate `setTimeout()` calls.

7. `setTimeout` Inside a Function

Instruction:

Create a function named `delayedMessage()` that prints **"This is delayed"** after **2 seconds** when the function is called.

8. Timing Function with Variables

Instruction:

Store a message in a variable and display it after **4 seconds** using `setTimeout()`.

9. Understanding Delay Time

Instruction:

Write a program that uses `setTimeout()` with a delay of **0 milliseconds** and prints **"Executed after call stack"**. Observe the output.

10. Difference Observation

Instruction:

Write two programs:

- One using `setTimeout()`
- One using `setInterval()`

Both should print **"Hello"** after 2 seconds. Observe and explain the difference in behavior.
